CASTELLINI.COM

GREAT EXPECTATIONS

In keeping with the quality that has always been Castellini's hallmark, this dental unit offers across-the-board improvements. The revolutionary Skema 8 is set to 'rewrite the future' of dental practices. Delivering outstanding performance through cutting-edge technology and fully renewed design, Skema 8 aims to meet even the highest expectations.
The future, today.

FIRST-CLASS DESIGN

The Skema 8 CP model was developed to meet the specific needs of dentists who prefer instruments with hanging tubes and those who work mainly in the 12 o'clock position. Each element has been designed to ensure working freedom while keeping the patient relaxed and comfortable.
Ergonomics to match the operating style.

ERGONOMICS AND VERSATILITY

VERSATILE INSTALLATION

Castellini has designed a system that gives dentists greater freedom of choice with regard to positioning the dental unit inside the practice and hooking up to existing connections. Depending on the floor outlets and their position, the dental unit can be installed using the connection located directly under the leg rest or the one under the front part of the unit body.

The adjustable footrest allows for easy, thorough disinfection.

SLIDING INNOVATION

The result of cutting-edge research, Skema 8 offers outstanding practicality. The innovative Sliding system - which combines backrest lowering with forward seat movement - leaves the work zone unaltered and ensures dentists no longer have to move accessories during treatment. More comfortable for the patient (as it involves less back compression), the Sliding system makes the Skema 8 perfect for smaller practices. With the seat displaced by 18 cm, the dentist gains that same amount of operating space in the 12 o'clock position. Soft Motion technology ensures fluid movement and eliminates all associated noise. Moreover, the Slow Mode allows activation of very small patient chair movements. This helps users make precision adjustments during implantology sessions or while using the microscope.

UNIQUE PERSONAL EXPERIENCE

A perfect blend of style and practicality, the backrest combines unprecedented comfort with the very best technological solutions. Built with a strong framework and soft padding, it features tough, easy-to-clean upholstery.

SMART SHAPING

The shape of the backrest streamlines access to the operating zone both in frontal view and indirect vision mode. Surgical padding reduces the pressure points on the patient's body, favouring microcirculation and ensuring greater comfort.

COMFORT AND SUSTAINABILITY

The chair incorporates a patient presence sensor. Users can apply settings that leave the dental unit on stand-by once the patient leaves in order to reduce energy consumption. Where the DiVA virtual assistant is in use, the sensor transmits statistical data to monitor effective dental unit usage over the period of interest. The chair also includes a convenient automatism that switches the operating light on/off as a function of patient presence. The backrest features an exclusive pneumatic-release orbital headrest that pivots on three axes and allows for quick, precise assisted positioning. Movement is activated by the button on the lower side of the headrest.

NORDIC BACKREST

A backrest designed for those who want to offer patients sturdy arm and elbow support, allowing excellent access for dentists who work in the 12 o'clock position.

LATERAL SLIDE FOOT CONTROL

Lets dentists control Chip Air and Chip Water functions on the instrument in use, invert rotation of the micromotor, control patient chair movement and switch on the operating light. Cabled and wireless versions available.

PRESSURE-OPERATED FOOT CONTROL

Provides the same functions as the lateral slide foot control. Both devices also provide, in surgery mode, peristaltic pump activation and programme changeover controls. Cabled and wireless versions available.

POWER PEDAL FOOT CONTROL

The third foot control includes all the functions of the previous models and is characterised by two additional elements to recall two more saved working positions. Cabled and wireless versions available.

LATEST-GENERATION TECHNOLOGY

Technology is racing towards new frontiers. Castellini makes the best of every new development to give dentists a next-gen interface that provides ever-better performance and user-friendliness. Moreover, Skema 8 combines NFC technology with a wearable accessory, allowing dentists to work seamlessly with the dental unit.

MULTIPLE CUSTOMISED SET-UPS

NFC technology makes it possible to access the dental unit - which is equipped with an integrated system - and save personalised preferences and settings. With up to 20 memory slots available, this is ideal for multi-user practices. This option involves using a bracelet that instantly connects to the dental unit where the dentist's preferences (chair position, interface, light settings, cuspidor bowl and cup preferences, as well as the operating parameters of integrated instruments) were previously saved.

FULL TOUCH INTERFACE

The Full Touch console with 7" multitouch display ensures user-friendly control of dental unit functions. What's more, dentists can adjust instrument operating parameters by setting their own preferences and can control/monitor hygiene devices. The integrated software manages endodontic, implantology and conservative functions. Users can also display images, X-rays and video tutorials.

VOICE CONTROLS

Dentists have numerous voice-controlled functions at their disposal. This speeds up workflows and improves hygiene by letting dentists bypass physical contact with the control panel and the integrated accessories. The different instrument modes are voice-activated. It's also possible to control the operating light and the patient chair, by selecting one of the saved positions. Users can also start the timer when performing clinical procedures such as impression-taking.

NFC TECHNOLOGY

Just tap the bracelet on the NFC symbol on the side of the dentist's module to connect to the dental unit.

DENTISTS' PROFILES CAN BE SAVED

Dentists can customise every single setting and save them all on a memory device. These preferences can be uploaded to the dental unit in seconds via the USB port.

PROFILE MANAGEMENT

As-standard management of 4 user profiles allows them to set personalised parameters for the patient chair, cuspidor bowl and instruments, including pre-settings for implant and endodontic procedures.

A NEW ERA OF DESIGN

The radically innovative Skema 8 features eye-catching design and is shaped to deliver exceptional compactness. Everything has been designed to boost the functionality of each element: its clean, essential lines - combined with state-of-the-art technology - deliver nothing less than a revolutionary step forwards.

LEVERS WITH SIDEFLEX TECHNOLOGY

The instrument levers are compact yet provide extensive excursion and fine-tuned balance. Optimised with exclusive "SideFlex" technology, they also follow lateral tubing movements thanks to the presence of a swing joint. The levers also ensure precision recovery, thus preventing wrist fatigue, and are completely removable.

LIGHT&EASY MODULE

The dentist's module with over-the-patient delivery is light and easy to move.

- The vertical positioning can be activated and deactivated by lightly touching the capacitive sensor.
- Increased tubing extension capacity.
- Large and easy-to-access transthoracic tray holder.
- Self-balanced instruments to minimise dentist wrist fatigue.
- Optional end-of-stroke lock system for enhanced freedom of movement.

COMPACT TRAY HOLDER

The new compact version of the tray holder features essential design and broadens the operator's freedom of movement.

BALANCED INSTRUMENTS

Thanks to the articulated joint of the levers, instruments are light and easy on recall. Balance and traction during return are both adjustable.

THE CONVENIENCE OF VERSATILE ERGONOMICS

Designed for dentists who use hanging tubes, the compact module offers plenty of scope for positioning around the work area. A large handle smooths horizontal movement. The practical instrument layout and the shaping of the individual holders help prevent any accidental instrument drops during repositioning. Workflows are also streamlined by differences between the tilt angles of the inner and outer instruments.

EVERYTHING UNDER CONTROL

Central positioning on the front of the module makes the 7" Full Touch display easily accessible to the dentist. Smaller overall module dimensions have been combined with optimised operating spaces. A button on the display activates the pneumatic release to allow height adjustment of instrument positioning.

The innovative control panel allows simple, practical management of instruments, patient chair and integrated systems and assists the dentist in every clinical specialisation, from conservative dentistry to oral surgery.

TRANSTHORACIC TRAY HOLDER

The transthoracic tray holder features a wide supporting surface that does not interfere with the patient. It can be positioned and moved horizontally.

THE SIXTH INSTRUMENT

The sixth instrument module can be mounted on the side of the dentist's module. The dentist can choose between intraoral camera and curing light (note that the application is unavailable if the Zen-X X-ray sensor is installed).

THE AESTHETICS OF PERFORMANCE

Every technical element and design feature on the Skema 8 has been planned meticulously. From the innovative carbon look to the quality of the materials and the construction, every aspect of the dental unit has been developed to create a comfortable, practical, technology-rich environment: a modern practice where dentists can make the most of their hard-won skills.

ASSISTANT'S MODULE

The assistant's module, fitted on a vertically-adjustable double arm, adapts to any working method and is available with 4 or 5 holders..

CUP FILLING SENSOR AND MOTOR-DRIVEN CUSPIDOR BOWL

Cup filling is now fully automated and gives the patient greater autonomy. Together with the new motor-driven cuspidor bowl, this speeds up rinsing considerably.

PERFECTLY INTEGRATED IMPLANTOLOGY

Featuring a fully integrated implantology system, Skema 8 streamlines all implant surgery tasks and operating protocols. This makes it easier for dentists to perform implant treatment, letting them focus exclusively on the procedure and the patient. The implantology configuration makes use of a powerful Implantor LED induction micromotor, a peristaltic pump incorporated on the module, and an advanced control panel that makes it possible to quickly customise and save pump speed, torque and delivery rate parameters.

Shock- and water-resistant, the 7" capacitive multitouch screen is compatible with multimedia content. The user interface can be personalised. Different operator profiles can be saved on the same dental unit, and the relative customised settings saved on a USB stick.

GOLDSPEED EVO R20-L CONTRA-ANGLE
Specific for surgery. Autoclavable and thermodisinfectable, it can be disassembled for thorough cleaning. With internal cooling, external spray and LED with integrated generator.

IMPLANTOR LED MICROMOTOR
Noiseless and ultra-light, the Implantor LED micromotor is vibration-free and characterised by extremely high torque. With suitable contra-angles, it can deliver up to 70 Ncm.

TORQUE CURVES
The dentist can also use an integrated function that records torque curves during surgery. Documentation will also be produced in an exportable form after the treatment session to keep track of the torque delivered and the tightening torque of the implant. For an even clearer view during treatment, it's also possible (where an integrated camera is available) to view the curve on the monitor integrated on the dental unit: a key asset during academic and training activities.

PRECISION ENDODONTICS, ALWAYS

With Skema 8, all endodontic tasks and correlated treatments are assisted to ensure dentists receive valuable help. Safe, precision control of the endocanal bur, an integrated bur database and perfect control of specialised functions make the Skema 8 an indispensable endodontics tool. What's more, the dental unit gives the dentist control of all the most sophisticated control parameters such as Autostop, Autoreverse and Autoforward. Now with an even more user-friendly interface, the innovative control panel provides exceptional performance and supplies dentists with valuable information on a wide range of clinical functions.

RECIPROCATING MODE

Together with the EVO E4 contra-angle, the control mode with alternating rotation allows for the use of RECIPROC®, RECIPROC BLUE® and WAVEONE GOLD® reciprocating files. The endodontic file brand names are not owned by Cefla or any of its subsidiaries.

DATABASE

For all traditional endodontic procedures, the control panel is able to automatically set optimum parameters thanks to an inbuilt database of the most common endocanal files.

LAEC - INTEGRATED APEX LOCATOR

The device helps the dentist locate the root apex via an audible/visual signal. Combined with the EVO E4 contra-angle, it also integrates the APEX-STOP function which automatically switches the file off upon reaching a set safety threshold.

EVO E4 CONTRA-ANGLE

Suitable for any type of endodontic treatment, the device is also designed to be compatible with Castellini reciprocating mode and with the APEX-STOP function of the Castellini apex locator.

CUTTING-EDGE INSTRUMENTS

Built according to the highest technological standards and by drawing on Castellini's 80 years of experience, all instruments, handpieces and accessories are designed to meet every possible dentistry need. Cutting-edge instruments improve every aspect of implant surgery, and conservative and endodontic dentistry.

IMPLANTOR LED FLUO

The new, now-quieter Implantor LED micromotor features tubes that improve handling. Moreover, it's available with the optional FIT (Fluorescence-aided Identification Technique) function that lets users detect the presence of composite materials with a special UV LED light. This technology makes tasks in the conservative, orthodontic and aesthetic fields more precise.

Implantor LED FLUO doesn't just highlight the composite fillings, differentiating it from the natural structure of the tooth: it also highlights brackets on fixed braces and the invisible attachments used to secure transparent corrective braces.

GOLDSPEED EVO CONTRA-ANGLES

Castellini provides a complete set of contra-angles for every dental field; implantology, endodontics and the various areas of conservation.

T-LED

The curing light can be used as a direct version or 120° angled version. With a high-power LED up to a maximum of 2,200mW/cm² and a 430 to 490nm emission band, the T-LED lamp offers 6 pre-set programmes and a sterilisable optical guide.

SILENT POWER EVO TURBINES

Castellini offers a complete set of turbines; dentists can choose between standard and miniature heads according to preference.

SYRINGE

Featuring a streamlined and easy-to-handle design, the syringe provides six functions. The handle and tip are autoclavable.

OUTSTANDING SPECIALIST PERFORMANCE

Castellini provides dentists with a selection of ultrasound devices for a range of tasks, from hygiene and scaling to implantology and maxillofacial surgery. Precise, reliable, light and easy to handle, these devices integrate seamlessly with Skema 8's software and electronics.

PIEZOLIGHT 6 / PIEZOSTERIL 6

Available with LED lighting and fully autoclavable ultrasound handpieces are suitable for prophylaxis, endodontics and periodontal procedures. Ultrasound vibrations are linear and controlled. There are no parasitic lateral vibrations. Constant control and self-adjustment of frequency according to load and the condition of the tip. Irrigation flow can be fine-adjusted via a special dial.

SURGISON 2

Specifically designed for oral surgery, implantology and osteotomy, this handpiece is available with a wide range of accessories for any treatment requirements. Interchangeable with Piezolight 6 and compatible with Piezosteril 6, subject to tubing replacement, the Surgison 2 handpiece is automatically detected and piloted by the dental unit at all times. Completely autoclavable, it provides optional irrigation with sterile fluids for complete asepsis of the operating area.

STERILE IRRIGATION

The Surgison handpiece is fed with sterile liquid thanks to the perfectly integrated peristaltic pump that synchronises with use of the instrument.

SET OF TIPS

The handpiece is supplied with an extensive set of tips so that users can perform the most traditional surgical tasks, from corticotomy to sinus lift. Practical autoclavable support.

USER-FRIENDLY INTERFACE

The easy-to-understand interface makes it simple to set the correct mode according to the treatment to be performed.

PERFECT LIGHTING AT ALL TIMES

A good view and, therefore, quality of light, are essential, as dentists must always be able to operate under perfect artificial lighting conditions. Skema 8 features the new Venus LED MCT, an operating light with outstanding performance. It uses a long-lasting, low-consumption LED source, features 3-axis adjustment and gives users plenty of scope to adjust lighting. Where the virtual voice assistant is available, the operating light can be voice-controlled [on/off, mode selection].

EXCEPTIONAL BRIGHTNESS

The new Venus LED MCT lamp rotates on three axes to ensure perfect lighting of the operating field in any practice or position. Featuring exceptional brightness, specific values can be set to match clinical needs.

The No Touch sensor can switch the lamp on/off and adjust light intensity up to 50,000 Lux. The hermetically sealed front screen is easy to clean, and the handles can be removed and sterilised in an autoclave.

TEMPERATURE ADJUSTMENT

The innovative system makes it possible to illuminate with the right light every clinical discipline, with 3 different temperature values: warm, neutral and cool light.

CRI VALUE

Absolute colour fidelity thanks to a colour rendering that on a 0 to 100 measuring scale stands above 95.

COMPOSITE MODE

The quick and easy activation of the Composite mode prevents the pre-curing of composite materials.

WARM, NEUTRAL AND COOL COLOUR

All temperature variations, from warm to neutral or cool and vice versa, can be activated with ease, ensuring a perfect view of the operating area according to the treatment being performed at all times.

COMPOSITE MODE

This feature changes the light wavelength to prevent the pre-curing of composite materials while ensuring optimum lighting of the operating field.

SAFE CERTIFIED HYGIENE

Close, continuous collaboration with leading university research centres has been a Castellini hallmark since its founding. Providing patients with a perfectly safe clinical environment is one of the dentist's most delicate and important tasks. It thus follows that efficient, easy-to-use hygiene systems streamline and optimise workflows in the practice.

M.W.B.

Reliable and effective, the M.W.B. system, used in conjunction with Peroxy Ag+, acts against all water-borne contaminants, including Legionella. Tests carried out on a dental unit over a 3-month observation period showed that regular use of M.W.B. and daily execution of an intensive disinfection cycle with the Autosteril system, ensure outstanding water hygiene quality, with bacterial loads kept to zero.

AUTOSTERIL

The Skema 8 dental unit features a high-quality automatic system that disinfects all the spray water circuits. It's also equipped with an integrated instrument collection tank, which makes it easier to position the instruments and run the cycle. Used together with Peroxy Ag+, the Autosteril system ensures a mycobactericide, bactericide and anti-Legionella action, certified by the Sapienza University of Rome. Autosteril helps hygienisation at the end of a day's session and allows for short cycles to be carried out in the following steps:

- circuit draining with compressed air;
- addition of 3% H₂O₂ to the spray water circuits;
- 'hold time' allowed for liquid to work to intensive disinfection results;
- liquid draining with compressed air;
- water flushing (either from mains or distilled).

The analysis performed by the Sapienza University of Rome on the effectiveness of the Autosteril system proved that the disinfection provided is sufficient to "eradicate all tested microbes from the piping of the dental unit, even with higher contamination levels."

TIME FLUSHING

To drain stagnant fluid inside the piping after use, the Time Flushing feature carries out a complete water exchange with a timed flow of the supply fluid.

S.S.S. BOTTLE

The stand-alone supply system is equipped with a 1.8 litre capacity pressurised tank, easily accessible from outside to facilitate filling or replacement.

TOTAL PROTECTION

S.H.D.

Flushing and sanitisation of the suction system with water and a special liquid take approximately 2 minutes: ideal as a between-patients cleaning procedure.

To maintain outstanding levels of hygiene on the external parts of the dental unit and in the workplace as a whole, Castellini has developed an advanced passive protection concept. Meticulous design of every single element on the Skema 8 ensures that patients and staff are constantly protected from risk of contamination.

DETACHABLE INSTRUMENT TUBING

Removable and easily disinfected, the tubes make cleaning and replacement operations easier and faster.

REMOVABLE DENTIST'S MODULE HANDLE

It can be easily removed for maximum hygiene.

REMOVABLE LAMP HANDLES

Can easily be removed and autoclaved.

GLASS DISPLAY FILM

Disposable film to protect the assistant's keypad and Full Touch control panel.

CUSPIDOR BOWL

The cup-and-bowl-fill unit can easily be removed and sterilised in an autoclave. Note that the cuspidor bowl handle is removable and autoclavable.

FILTERS + UNIT COVER

Stylishly protected by a cover, the filters can easily be removed to facilitate emptying and cleaning tasks.

A CONNECTED SURGERY

VIRTUAL ASSISTANT AND REMOTE MONITORING

Di.V.A. (Digital Virtual Assistant) optimises the workflow in advanced dental practices. In addition to being viewable on a PC, Di.V.A. can be easily consulted on smartphones and tablets.

In combination with Di.V.A., users can increase the efficiency of the practice by activating the EasyCheck service: each connected dental unit can rely on real-time remote diagnosis and technical support, vital for minimizing downtimes and ensuring continuity of service.

easycheck

Simply by connecting to the internet with any browser, and without having to download any software, dentists and/or practice owners can access a website that offers a comprehensive range of digital services, remote assistance, video tutorials and updated user manuals for purchased models.

DASHBOARD

A simple dashboard lets the dentist monitor dental unit activity across all functions and analyse dental practice efficiency. In larger surgeries this is an excellent tool for managing heavy workloads and planning maintenance tasks.

Where the patient sensor is present, statistical data on how the dental is used can be collected and processed; the information is transmitted to Di.V.A. and displayed on the dashboard.

MONITORING HYGIENE SYSTEMS

Di.V.A. logs completed disinfection cycles, building up a database that is useful for in-practice assessment. This data also helps users estimate their consumption of disinfectant products and monitor the effective reactivation of equipment.

INSTRUMENT MODE

The dashboard lets users monitor effective usage of integrated instruments such as the micromotor; this includes detailed information on the employed work modes (conservative, endodontic and implantology).

EXCELLENT MULTIMEDIA COMMUNICATION

The result of cutting-edge, efficient, reliable technology, Castellini's multimedia system consists of an in-built camera with an HD sensor and 90° viewing angle, plus a 22" monitor. Excellent multimedia communication simplifies the dentist-patient relationship and allows for more effective, better-informed illustration of treatment outcomes. If the dental unit is connected to a PC, dentists can use the virtual voice assistant to interact with the image management software. This lets them save images just captured by the camera or X-ray sensor.

INTEGRATED HD CAMERA

The integrated camera features a streamlined design for a better use inside the oral cavity, and an ergonomic handle. HD-quality images ensure perfect rendering and maximum investigation accuracy.

- Optical system with 7 glass lenses and 16:9 format sensor
- Partially retroflexed 90° viewing angle
- Depth of field from 5 to 70mm
- Freeze-frame activation through the touch-sensitive key

The easy-to-attach and remove Macro Cap accessory magnifies up to 100x to deliver detailed and extremely sharp images.

22" LED MONITOR

The 22" LED monitor with 16:9 format ensures perfect image display and easy, comfortable interaction thanks to ergonomic design and the special IPS panel that provides a wide viewing angle. Images are managed via the new Full Touch Multimedia control panel which allows for the adjustment of image contrast levels, colours, rotation and zoom. The monitor can be integrated into the dental unit either with a single arm or a double-jointed arm for smoother interaction with the patient and greater ease of use.

CASTELLINI DIAGNOSTICS

The integrated X-ray unit meets all diagnostic needs, providing improved ergonomics and a greater degree of patient involvement. Dentists can use the virtual voice assistant to manage sensor-captured images when the dental unit is connected to the PC.

RXDC WITH EXTEND TECHNOLOGY

Thanks to extensive internal collimation and an extremely small focal spot, the X-ray unit provides high-quality images to ensure fast, accurate diagnosis.

The integrated Zen-X sensor, available in two sizes, is housed in the dentist's module, thus speeding up acquisition of intraoral X-ray images. In a matter of seconds, the reprocessed image is displayed on both monitor and control panel.
